

NIAID's sole judgment, the ability to develop a viable vaccine. Potential collaborators considered equally competitive in terms of capacity will also be evaluated based on their plans and intent to distribute in areas with immediate need, followed by the likelihood of the proposed plan contributing to the achievement of a self-sustaining vaccine ecosystem in developing nations.

This material is available for access for commercial development in accordance with 35 U.S.C. 209 and 37 CFR part 404, as well as for further development and evaluation under a research collaboration agreement.

Potential Commercial Applications:

- Prophylaxis against mpox in normal or high-risk populations
- Vaccine research

Competitive Advantages:

- MVA clone-1 material is believed to be functionally and genetically similar to FDA-approved vaccine material
- Identification of vaccine candidates that can elicit protective antibodies against mpox in normal or high-risk populations
- Royalty-free access for vaccine development and/or research

Development Stage:

- Pre-clinical

Abstract: The General Mining Law (30 U.S.C. 29, 30, and 39) authorizes a holder of an unpatented claim for hardrock minerals to apply for fee title (patent) to the federal land (as well as minerals) embraced in the claim. Division E, Title I of the Consolidated Appropriations Act, 2024 (Pub. L. 118–42), the annual appropriation bill for the Department of the Interior, prevents the BLM from processing mineral patent applications unless the applications were grandfathered under the initial legislation. While grandfathered applications are rare at present, the approval to collect the information continues to be necessary because of the possibility that the moratorium will be lifted and applicable regulations that contain the information are still part of the Code of Federal Regulations. OMB control number 1004–0025 is scheduled to expire on July 31, 2025. This request is for OMB to renew this OMB control number for an additional three (3) years.
