All filings must clearly identify the project name and docket number on the first page: Weyauwega Hydroelectric Project (P-2550-030).

m. The application is not ready for environmental analysis at this time.

n. *Project Description:* The existing project consists of a 240-foot-long dam that includes: (1) a 90-foot-long earth section faced with steel sheet piling; (2) a 50-foot-long concrete section with three 12-foot-long Tainter gates with a crest elevation of 771.28 National Geodetic Vertical Datum of 1929 (NGVD 29) when fully open; (3) a 29-foot-long, 56-foot-wide powerhouse that includes an intake structure and a 210-kilowatt vertical Francis turbine-generator; and

(4) a 71-foot-long earth section faced with steel sheet piling.

The dam creates an impoundment with a surface area of 253 acres at a normal pool elevation of 770.2 feet NGVD 29. From the impoundment, water flows through the powerhouse to a tailrace that empties into the Waupaca River. The generator is connected to the regional electric grid by a 4.16-kilovolt (kV) underground generator lead line and a step-up transformer.

Project recreation facilities include a hand-carry boat portage route and a hand-carry boat put-in site approximately 150 feet downstream of the dam.

The current license requires the licensee to operate the project in a run-of-river mode, such that outflow from the project approximates inflow and the surface elevation of the impoundment is maintained between 769.95 and 770.45 feet NGVD 29. The minimum and maximum hydraulic capacities of the powerhouse are 35 and 229 cfs, respectively. The average annual generation of the project was 1,385 megawatt-hours from 2017 through 2023.

Wiscons8 proposes to: (1) continue operating the project in a run-of-river mode and maintaining the impoundment elevation between 769.95 and 770.45 feet NGVD 29; (2) replace the existing turbine runner ("from a Leffel 36z to a Leffel 36s") to improve turbine hydraulic efficiency; (3) install a new programmable logic controller to ensure compliance with run-of-river operation, including automation of the Tainter gates when inflow is greater than the 229-cfs maximum hydraulic capacity of the turbine; and (4) continue maintaining the project recreation facilities.
